Computational Linguistics; Cognitive Linguistics; Computational Syntax; Computational Sociolinguistics

Overview

I am a computational linguist working to model both (i) the emergence of grammar within individuals and (ii) variation in grammar across individuals, populations, and registers. To support this research, I've developed large multi-lingual geographic corpora. My work has also examined the impact of linguistic variation on LLMs and the impact of LLMs on linguistic variation.

Papers

My research is situated at intersection between linguistics and natural language processing. Thus, I have published widely in both fields. Here I am distinguishing between [NLP proceedings](#) and [linguistics journals](#) for convenience. Both represent peer-reviewed publications.
